

Job Description – Frontend Software Developer – Permanent, London

Location : London, United Kingdom

Purpose of Role

Restrata is the global leading provider of innovative safety, security and technology solutions.

We are looking for a mid-senior level frontend software developer with experience in low-code software development tools to join our progressive, dynamic team.

This will be a permanent role, based in London. You will work in an innovative, agile and multi-disciplined team to develop and deliver our proprietary safety & security solutions.

Contributing to the development process you will help generate delivery ideas and solutions whilst encompassing the full spectrum of design, coding, and testing. In addition, you will ensure successful delivery of key strategic objectives through the development of high-quality software.

Take the next big step in your career as part of our new platform team. Working on the next-generation of cloud services for integrating leading edge location services and global intelligence. Use your skills to work cross web and mobile channels. This is a huge opportunity to work on a product that makes a real difference to customer and employee's everyday lives.

You can find out more about what we do on YouTube at: <https://youtu.be/PhYkXe-ZLwM>

Key tasks and responsibilities

- Deliver features using agile development practices and by writing beautiful, maintainable code in the frontend and backend (where necessary) of our systems.
- Participate in Agile ceremonies and departmental events
- Work with inhouse and offshore teams to develop and deliver customer requirements
- Work under a TDD mind-set with regression testing at the heart of your development strategy.
- Produce code against our set of defined technical standards and processes
- Provide 2nd and 3rd Level support on our software solutions

Requirements

- Experience in low-code software development tools. (Outsystems desirable, not essential)
- Must be open to learn and develop software using Outsystems low-code development platform (training provided)

Essential Skills

- Proficient in fundamental frontend languages (e.g.HTML5, CSS3, JavaScript)
- Proficient in modern JavaScript frameworks such as JSON, React, Node, Angular etc.
- Experience in UI/UX design.
- Experience using front-end test-driven development
- Experience in Responsive design
- Good knowledge of browser debugging
- Knowledge in C#, .NET Core & ASP.NET development OR Java
- Knowledge in Relational Database Technologies, ideally MS SQL
- Understanding of software development best practices and OO design patterns
- Familiar using version control systems
- Good problem-solving skills
- Attention to detail

Qualifications & Personal Skills

- Degree in Computer Science or related field preferable but not essential
- Ability to be flexible and pragmatic
