**resilienceOS**

Locate

Protect what matters

Streamline your security operations by integrating location data from multiple sources into a single, unified operational picture. Accurately locating your people and physical assets, turns traditionally siloed data into actionable intelligence. This approach is crucial for protecting your personnel, facilities, assets and supply chains from evolving risks, ensuring you **protect what matters,** in an unpredictable world.

Connected Sites

Protect Your Locations, Assets, and the People Who Work There.

Connected Locations within resilienceOS delivers unparalleled visibility and control over your critical sites at local, regional, and global levels. It significantly improves operational management by integrating real-time access control data for precise on-site awareness, while providing powerful tools to streamline access, visitor, and muster management on the ground.

Summary of Key Features and Benefits:

- **Unlimited Location Plotting:** Add and manage an unlimited number of permanent or temporary locations.

- **Customisable Location Details:** Tailor location information to suit specific needs.

- **Personnel Location Linking:** Associate personnel to their work locations.

- **Real-Time Access Control Integration:** Instant visibility of on-site movements and access.

- **Efficient Mustering and Emergency Response:** Streamline mustering processes and emergency handling.

- **Accurate Visitor Management:** Ensure precise visitor counts and streamlined entry processes.

Progressively enhance the capabilities and operational visibility of your key locations.
Connected Locations provides your organisation and operators with all the essential tools to manage critical sites, from simple map pinpoints and real-time access control intelligence to comprehensive tools that ensure site safety and security on the ground.

Included within Base ⌄	**Base Locations:** Start with simple location pins on the map, categorised with essential details like names and addresses.	**Location with Personnel Association:** Link individuals, such as employees or contractors, to specific sites for enhanced personnel visibility
Upgrade to Professional ⌄	**Location with Access Control Data:** Integrate access control data for real-time POB tracking, ensuring up-to-date personnel counts.	
Upgrade to Enterprise	**Location with Access Control, Visitors & Muster** Manage fully connected sites with integrated muster capabilities for safe evacuations and accountability.

Connected Locations
Summary of Base Features:

Your Foundation for Comprehensive Location Visibility.
Connected Locations: Base equips your organisation with essential tools to begin plotting and managing locations, creating a digital twin of your operational landscape. This entry-level solution allows you to easily map permanent and temporary sites, categorise them with crucial details, and associate personnel with specific locations for enhanced risk assessment during emergencies. Connected Locations: Base provides everything you need to establish a strong foundation for monitoring and safeguarding your critical sites.

Location Convergence Engine
resilienceOS Location Convergence Engine automatically processes and harmonises all access control data to provide a holistic, accurate view of personnel movements both on and off-site. See People Location Intelligence for more details.

Plot Locations
Quickly plot permanent and temporary locations as map pins, categorising them with essential details like names, addresses, contacts, and risk information.

Allocate Roles and Permissions
Set custom visibility and management permissions for all locations, tightly controlling who can view and manage them, with tailored functional roles.

Link People to Locations
Associate individuals, such as employees or contractors, to specific work locations through direct assignment or HR feed integration, enabling better impact assessment during incidents.

Bulk Location Upload
Enables the rapid setup of multiple locations simultaneously from spreadsheets or other uploadable data sources, significantly reducing administrative time.

Custom Categorisation and Filtering
Allows for custom categorisation and filtering of locations based on criteria such as type, importance, or function, simplifying the management and monitoring of specific site
